Operative Hysteroscopy System

The Ackermann Operative Hysteroscopy System is designed to treat various types of intrauterine pathologies utilizing a minimally-invasive approach.

Gynaecology

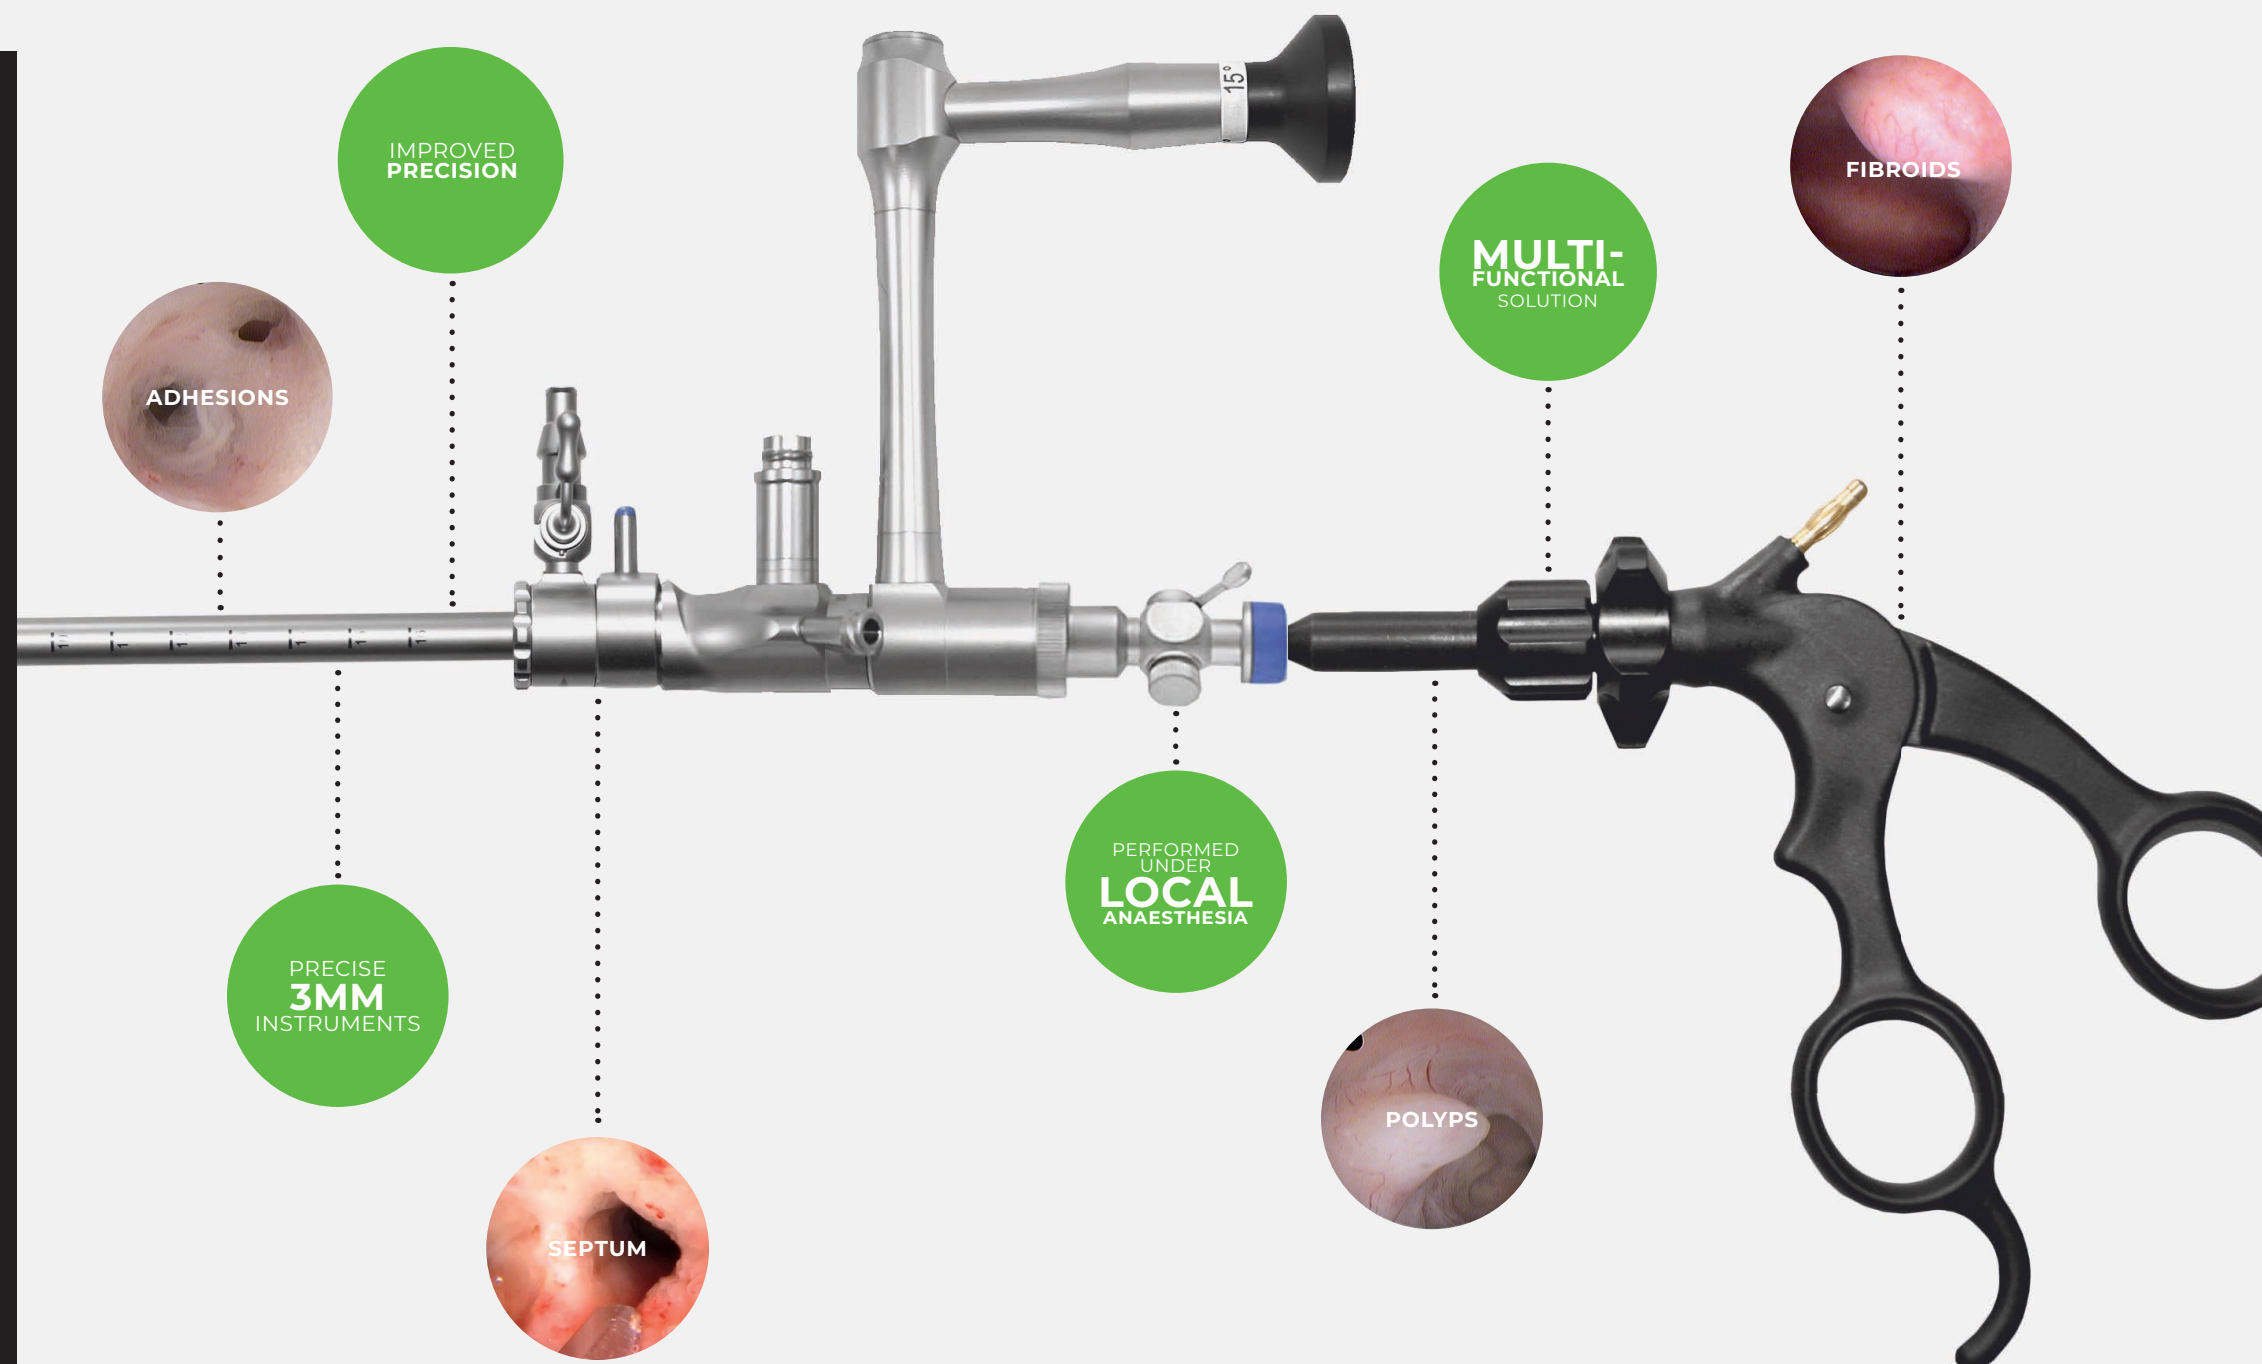

Operative Hysteroscopy System

Facts & Features

KEY FEATURES

- ✓ **Multifunctional endo-operative solution** for treatment of a large number of gynaecological diseases, such as: Polyps, adhesions, septum, fibroids (G0, G1 or G2 classes)
- ✓ With an industry-leading small outer diameter Ackermann offers a **truly minimally-invasive solution**
- ✓ **A complete range** of highly flexible 3 mm instruments ensures **full versatility**
- ✓ **Instrument length of 360 mm**, which is used with high-quality, ergonomic **Endo Lock™ handles** with 45° HF-port
- ✓ **Reduced risk** of endometrial thermal damages and synechiae
- ✓ **3 mm instruments** enable precise movements even in fundus and cornual areas
- ✓ This hysteroscopic procedure can be performed under **local anaesthesia**
